

The School Board recognizes that concussions and head injuries are commonly reported injuries in children and adolescents who participate in sports and other recreational activities. The Board acknowledges the risk of catastrophic injuries or death is significant when a concussion or head injury is not properly evaluated and managed. The Board recognizes that the majority of concussions will occur in “contact” or “collision” sports. However, in order to ensure the safety of all District students, this policy will apply to all competitive athletic, recess and physical education activities as identified by the administration.

Consistent with the National Federation of High Schools (NFHS) and the New Hampshire Interscholastic Athletic Association (NHIAA), the District will utilize recommended guidelines, procedures and other pertinent information to inform and educate coaches, youth athletes, and parents/guardians of the nature and risk of concussions or head injuries, including the dangers associated with continuing to play after a concussion or head injury.

The Superintendent or his/her designee will keep abreast of changes in standards regarding concussion, explore staff professional development programs relative to concussions, and will explore other areas of education, training and programs.

All coaches and physical education teachers will complete training as recommended and/or provided by NHIAA, New Hampshire Department of Education and/or other pertinent organizations. All coaches and physical education teachers shall undergo training in head injury and concussion management at least once every two years by both of the following means: (1) through viewing the NHIAA sport-specific rules clinic; and (2) through completing the NFHS or the Centers for Disease Control (CDC) on-line concussion in sports training at www.NFHS.com or www.CDC.gov.

Parent Information Sheet: On a yearly basis, a concussion and head injury information sheet shall be distributed to the student’s parent/guardian at the start of the school year. This information sheet may be incorporated into the parent permission sheet that allows students to participate in extracurricular athletics.

Coach’s/ PE Teacher’s Responsibility: A student who is suspected of sustaining a concussion or head injury or other serious injury shall be immediately removed from play and the parents notified.

Protocol for Return to Play

No student shall participate in any athletic event or practice, active recess activity or PE class the same day he or she is injured and:

1. Exhibits signs, symptoms or behaviors attributable to a concussion; or
2. Has been diagnosed with a concussion.

No student shall return to participate in an athletic event or active recess activity or PE class on the days after he/she experiences a concussion unless all of the following conditions have been met:

1. The student no longer exhibits signs, symptoms or behaviors consistent with a concussion, at rest or with exertion;
2. The student is asymptomatic during, or following periods of supervised exercise that is gradually intensifying; and
3. The student receives a written medical release from his/her treating certified health care provider (physician, nurse practitioner, physician's assistant) and their parent(s) or guardian(s).

The District may limit a student's participation to "Graduated Return to Play" standards and protocol, as determined by the student's treating certified health care provider.

Concussion Awareness and Education

To the extent possible, the Board encourages the administration to implement concussion awareness and education into the district's physical education and/or health education curriculum. The administrative decision will take into account all relevant considerations, including time, resources, access to materials, and other pertinent factors.

Academic Issues in Concussed Students

In the event a student is concussed, regardless of whether the concussion was a result of a school-related or non-school-related activity, school district staff should be mindful that the concussion may affect the student's ability to learn. In the event a student has a concussion, that student's teachers will be notified. Teachers should report to the school nurse if the student appears to have any difficulty with academic tasks that the teacher believes may be related to the concussion. The school nurse will notify the student's parents and treating physician. Administrators and district staff will work to establish a protocol and course of action to ensure the student is able to maintain his/her academic responsibilities while recovering from the concussion.

Section 504 accommodations may be developed in accordance with applicable law and board policies.

NOTE: A concussion is a traumatic brain injury that alters the way the brain functions. Effects are usually temporary, but can include problems with headache, concentration, memory, judgment, balance, and coordination. (Reference: Centers for Disease Control)
